DESCRIPTION

Title : "Score Tracker"

Description:

"Score Tracker" is used to monitor score from lecturer in my University, Diponegoro University, for now this application can only monitoring score from my majors, Computer Science. Collegers can see their score posted by their lecturer with this application.

Problem Solving:

In my University there are no places to post score like quiz score, score of colleger activeness during the class, etc., so they didn't know what scores are affecting their final score.

"Score Tracker" will download data from google sheet, place for lecturer to post scores, and store it in the database then those score will be displayed when requested.

Resources:

And this is the resource I used to build this final project.

- http://stackoverflow.com/

- http://developer.android.com/
